## Fibrelite

Recognized internationally as the industry standard, Fibrelite specialises in highly engineered Fibre Reinforced Plastic (FRP) lightweight composite manhole covers and underground enclosures which offer the very **best strength to weight ratio** in the industry and have since Fibrelite designed the world's first composite access cover back in 1980 for Esso UK (ExxonMobil).

Part of OPW, a Dover company, Fibrelite products are manufactured in Skipton, UK, North Carolina, USA, and Kuala Lumpur, Malaysia ensuring **quick delivery times** wherever you are in the world. Fibrelite has a large distributor support network, which provides local technical and installation support and after sales service. OPW has a network of offices around the world which allows them to service local client's needs globally.

Fibrelite has the **most comprehensive sump product range** on the market, including tanks sumps, dispenser sumps, remote fill sumps, transition sumps, electrical drawpits and sumps for tank gauging and monitoring wells, Fibrelite's fully conductive products can **deliver in the toughest conditions**.

Fibrelite has, on average, developed a new cover design every year since its conception and pioneered the first ever multiport composite covers. Fibrelite covers are watertight, lightweight and easy to remove. All covers are lockable, available for 25 tonne or 40 tonne loads and manufactured in accordance with EN 124.
